

## Effective strike management with Jira

Errors can be seen as chances if you use them for optimization. Where there is work being done, errors cannot be avoided 100%. Critical situations only occur when employees do not learn from their mistakes or if they do not use existing opportunities for quality improvements.

Jira strike management serves to optimize your processes by even identifying possible errors. It allows you to locate the error within the process in question and systematically eliminate it. Your management can also get an overview of all processes, identify your employees' errors, and counteract as soon as possible. That way, your employees can make suggestions to improve processes and therefore contribute to minimizing the risk of errors occurring.

The gathered information concerning errors can be used for your teams' systematic further education, so that the quality of your processes can be improved on a long-term basis.

### Atlassian functionality concerning strike management with Atlassian

- process quality overview with the aid of dashboards
- functions to analyze the consequences of potential failures to avoid risks
- functions for error analysis – failure analysis as a basis for quality improvements
- overview of your employees' working methods
