

## Reliable release management with Jira

Development, quality assurance, product management, marketing, support, and management: Everyone must know or be able to find out which functionality or change is included in which release status. Not least through agile software development, new builds and versions are created more often than in the past. It is noticeably more demanding, to document the content of a single release.

Without a release management tool like Jira, you lack the necessary transparency and therefore the ability to make precise statements towards your clients or the market. Especially when dealing with bugs affecting a released version, it is often critical to know, which exact changes have been released with a certain release, to be able to react properly.

Jira gives you the ability to automatize nearly all important tasks in release management and to make all important information concerning a certain release available at the push of a button.

### Atlassian functionality concerning release management

- multi-version releases across projects with a release board like in Kanban
- progress tracking, display of obstacles and release delays
- definition of user-defined release and version workflows
- automatization of routine processes
- time controlled releases
- version overview with time planning
- release boards as an information source for everyone
- reports and gadgets
- public REST-API

### Our services for your release management with Atlassian

- consulting concerning licensing and acquisition of your Atlassian licenses
- consulting and support from piloting to roll-out
- installation and implementation of Atlassian products
- masks, arrays, and workflows adjusted to your requirements
- definition and implementation of the roll and authorization concept
- scalable configuration of the Atlassian tools and add-ons
- implementation of all necessary reports and dashboards
- integration of Atlassian products into existing intranet solutions, realization of interfaces to databases
- trainings and workshops for users, key users, and administrators

### Your advantages

- transparency concerning the current release status at any time
- permanent overview of the versioning thanks to a history
- always informed about any changes
- better time planning thanks to the clear and easily manageable dashboards
- quicker software provision
