

Efficient test management with Jira and Confluence

Test management takes care of managing projects, versions, test cases, test documentation, defects, dependencies, and many more.

The clear definition of all functional requirements as a basis for all automatized or manual tests as well as the accountability of all recorded errors and problems must be guaranteed.

Jira supports your project and QS team with extensive features for your requirements management, issue and bug tracking, and with project management. Jira's features for team collaboration guarantee that everyone involved in the development cycle is included in the process.

Atlassian functionality concerning test management

► TEST CREATION

Collection of all necessary information like test case descriptions, priority, components to be tested, versions, attachments and information concerning user-defined arrays, linkage of test cases and issues, definition of your own workflows and adjustment of status values

► TEST PLANNING

Assignment of test cases and the according builds to a single or multiple test cycles, definition of deadlines, priority and task assignment to software developers, overview of processing status and the proper test cases

► TEST PROCEDURE

Assignment of status to test phases including the option to comment on them, linkage of errors with test phases and test procedure, creation of new test cycles for repetitions reusing the test cases

Our services for your test management with Atlassian

- consulting concerning licensing and acquisition of your Atlassian licenses
- consulting and support from piloting to roll-out
- installation and implementation of Atlassian products
- masks, arrays, and workflows adjusted to your requirements
- definition and implementation of the roll and authorization concept
- scalable configuration of the Atlassian tools and add-ons
- implementation of all necessary reports and dashboards
- integration of Atlassian products into existing intranet solutions, realization of interfaces to databases
- trainings and workshops for users, key users, and administrators

Your advantages

- reduced automation expenditure thanks to tool-based test management
- overview of test status, error and the proper correction situation at the push of a button
- clear reference in between development and test documentation
