

Identity & access management for enterprises of any size with Jira

The safe and transparent management of applications, authorizations and access rights in all IT systems is a must for enterprises of any size, at least since the implementation of the GDPR. Identity & access management (IAM) helps to meet the increasing requirements to user management as well as access and authorization management.

Jira offers an extensive IAM construction kit, that helps users to implement various processes and systems in an easy and economic way. From their employment to their exit from the enterprise, you can guarantee, that every user has the proper access rights, that they need to have in their area of activity. Thanks to the linkage across producers and the integration of third-party systems and with the aid of Jira IAM, a systems environment is created, which provably guarantees meeting all legal, contractual and internal regulations at any time – with the highest flexibility, optimal operative efficiency and maximum security.

The screenshot shows the 'Create Issue' form in Jira. The 'Project' is set to 'HR Projekt (pRP)'. The 'Issue Type' is 'Benutzerverwaltung'. The form is divided into tabs: 'Grundinformationen', 'Private Daten', 'Businessdaten', and 'Daten von AD/LDAP'. The 'Private Daten' tab is active, showing fields for 'E-Mail Privat', 'Telefonnummer Privat', and 'Adresse Privat'. A dropdown menu is open for 'E-Mail Gruppen', showing options like 'info', 'Geschäftsführung', 'Assistenz', 'Vertrieb', and 'alle Benutzer'. The 'Interim / Extern' section has 'Interim' selected.

Atlassian functionality concerning IAM

- ▶ clear capturing for all user-relevant data in the whole life cycle
- ▶ predefined scope of service for all essential functions without any Customizing effort
- ▶ numerous interfaces for application, technology, and system integration
- ▶ interfaces to MS Exchange, Office 365, and LDAP
- ▶ predefined modules, standard functionalities, templates, and best practices
- ▶ IAM dashboards for controlling
- ▶ predefined workflows for process automatization

Our services for your IAM with Atlassian

- ▶ consulting concerning licensing and acquisition of your Atlassian licenses
- ▶ consulting and support from piloting to roll-out
- ▶ installation and implementation of Atlassian products
- ▶ masks, arrays, and workflows adjusted to your requirements
- ▶ definition and implementation of the roll and authorization concept
- ▶ scalable configuration of the Atlassian tools and add-ons
- ▶ implementation of all necessary reports and dashboards
- ▶ integration of Atlassian products into existing intranet solutions, realization of interfaces to databases
- ▶ trainings and workshops for users, key users, and administrators

Your advantages

- ▶ solutions across producers for the use throughout your enterprise
- ▶ extensive, predefined scope of services guarantees their quick and cost-effective introduction and operation
- ▶ small effort with adjusting standard elements for additional requirements
- ▶ regular, audit-compliant, and universal display of IAM requirements automated in all systems
- ▶ economical solutions also for SMEs
